The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                          New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 QVQLQESGGGLVQAGGSLRLSCAASGSIGSIHTMGWYRQTPGTERDVVATIQDGGSTNYA

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #9 from lama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 DSVKGRFTISRDNDKNTEYLQMNNIKPEDTAVYYCNAQVRVRFSSDYTNYWGQGTQVTVS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            원
                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #15 from lama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

AAE10566 ID AAE10566 standard, peptide, 124 AA.

RESULT 10

```
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #10 from llama (camelid) species
                                                                                                                                                Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                   98. .110

The invention describes a protein array (I) comprising a number of heavychain variable domain antibodies or antibody fragments, obtainable from chain variable domain antibodies or antibody fragments, obtainable from camelidae. The method is useful for removing abundant proteins from an extract or sample which do not provide useful information on the condition of a call or tissue in the extract or sample to be investigated. (I) is useful for detecting the presence of individual proteins in a sample, comparing the distribution of proteins in different call types, and identification of proteins that may be of importance in determining the altered properties of calls in disease, aging or other conditions. Using a heavy-chain variable domain derived from an immunoglobulin that is naturally devoid of 11940 times, and detection of provides a number of advantages, such as an improvement of sensitivity/resolution in the order of 10-100 times, and detection of post-translationally modified proteins. The invention also describes a method (II) that enables the simultaneous processing of large numbers of target antigens in a controlled way. The incorporated phage-ELISA callows the complete automation about the success or failure of a certain panning condition. This feature concline with the microtiter place format allows the complete automation of the technology, based on computer-made
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        decisions on the values of the phage-ELISA for continuation of a limited number of selections. In (II), due to the fact that many different conditions can be tested, varying amounts of input-phages can be used simultaneously in order to decrease the enrichment of sticky phage-antibodies. Micro-panning is an effective tool for selecting both naive, synthetic and immune libraries on large numbers of different target molecules, enabling the generation of large panels of antibodies in short time frames needed for the generation of arrays (proteomics). This sequence represents an immunoglobulin (IgG) heavy chain variable domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistence in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.

extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEI antibody (denoted Clone46) heavy chain variable domain (VH) attached to peptide linkers, myc and hisé tag. The potato SBEII is a starch branching enzyme also designated SBE A

The patent discloses antibodies or their fragments comprising a heavy devoid of light chains specific for inhibiting human distary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human panoreatic lipse (HPL) or human gastric lipse (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting WHH fragment, HGL #4 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                           61 DSVKGRFTIARENAKNIVYLQMSSLKPEDTAVYYCKGRGGLTQYSEH-DYWGGGTQVIVS 119

UNIL ) UNILEVER PLC (UNIL ) UNILEVER NV.

The present invention relates to a method for modifying a plant to

Example 13; Fig 28; 81pp; English

cellular compartment.

```
Uncrional equivalent, on a callular compartment comparises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to prometers and provided with a additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a callular compartment. The method is used for producing a heavy chain compartment. The method is used for producing a heavy chain to a callular compartment. The method is used for producing a heavy chain to a collular compartment. The method is used for producing a heavy chain to a collular compartment is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be carriachle to retain the antibody product with the plant rather than carriachle to retain the antibody product with the plant rather than artigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII attibody (denoted Clone60) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

{	New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
PS A	Example 2; Page 10; 37pp; English.

```
ö
           The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                        DSWKGRFTISRDNAKNTVYLHMMNLKPEDTAVYYCKALISSYDGSWNDYGGGGTQVTVSS 120

                                                                                                                                                                                 The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DSMKGRFTISRDNAKNTVYLHMINILKPEDTAVYYCKALISSYDGSWNDYGGQGTQVTVSS 120

                                                                                                                                                                                                                                                                                      Ĥ
                                                                                                                       The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHM) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human panoreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from llama (camelid) species

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #11 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 원
                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                         The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #4 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                              61 DSMKGRFTISRDNAKNTVYLHMNNLKPEDTAVYYCKALISSYDGSWNDYGGQGTQVTVSS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                         9

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #18 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 DSMKGRFTISRDNAKNTVYLHMNNLKPEDTAVYYCKALI-SSYDGSWNDYGGQGTQVTVS 119

                                                                                                                                                                                                                                                                                                                                   The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes. Sepcially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #9 from lama (camelid) species

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #10 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 DSMKGRFTISRDNAKNTVYLHMNNLKPEDTAVYYCKALISSYDGSWNDYGGOGTQVTVSS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                             The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #10 from llama (camelid) species

AAE10566 standard; peptide; 124 AA.

```
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #15 from llama (camelid) species
                                                          Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 DSMKGRFTISRDNAKUTVYLHMNNLKPEDTAVYYCKALISSYDGSWNDYGGQGTQVTVSS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #12 from llama (camelid) species
                                                                                                                                              Llama antibody, camélid, anorectic, heavy chain variable domain, VHH; human dietary enzyme inhibitor; medicament, human pancreatic lipase; HPL; food, human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1;

The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a functional equence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, present sequence is an anti-potato SBEII antibody (denoted Clone46) heavy chain variable domain (VH) attached to peptide linkers, myc and hisé tag.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a performance of the performance of the product of peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunishing an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody (denoted Clone68) heavy chain variable domain (VH) attached to peptide linkers, myc and hisé tag.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a

```
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VIII) derived from an immunosjobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipse (HGL) or human gastric lipse (HGL) which are useful for the cosmetic control of body weight of human beings.
                                                                                                   Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                 98. .110

devoid of light chains specific for inhibiting human dietary enzymes. The maribodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especiálly human pancreatic lipase (HPL) or human gastric lipase (HPL) has the useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from lama (camelid) species

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
